

Stellar parameters for solar-type stars with rotation

Maria Tsantaki

Centro de Astrofísica da Universidade do Porto

November 10, 2014

instituto de astrofísica
e ciências do espaço

Outline

- Methods: Spectral synthesis technique
- Problem with fast rotators
- Comparison of methods
- GAIA-ESO methods

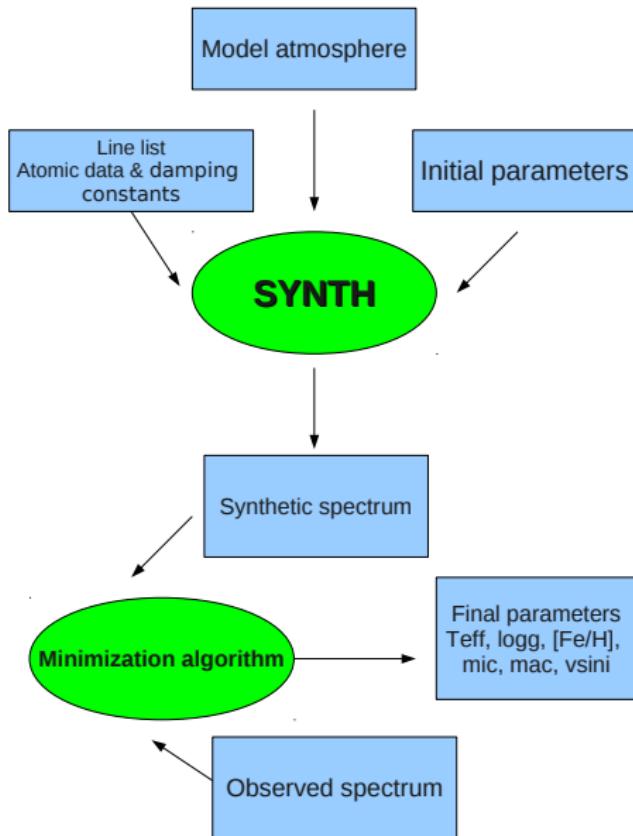

Fundamental atmospheric stellar parameters

Temperature
Surface gravity
Metallicity
(rotational velocities)

Mass
Radius
Age
Chemical abundances

2 main spectroscopic techniques: EW method & spectral synthesis
technique

Spectral synthesis (SME, Valenti & Piskunov 1996)

Methodology

- Line list and wavelength intervals

Methodology

- Line list and wavelength intervals
 - Intervals of 2Å around 51 Fe lines (Sousa+ 2010; Tsantaki+ 2013)
 - Atomic & molecular data from VALD but calibrated for the Sun

Methodology

- Line list and wavelength intervals
 - Intervals of 2Å around 51 Fe lines (Sousa+ 2010; Tsantaki+ 2013)
 - Atomic & molecular data from VALD but calibrated for the Sun
- Initial conditions
 - T_{eff} : B-V,
 - $\log g$: parallax, T_{eff}
 - v_{mic} : $T_{\text{eff}}, \log g, [\text{Fe}/\text{H}]$ (Tsantaki+ 2013, Mortier+ 2013)
 - v_{mac} : T_{eff} (Valenti+ 2005)
 - $[\text{Fe}/\text{H}], v \sin i$ set to solar values

Methodology

- Line list and wavelength intervals
 - Intervals of 2Å around 51 Fe lines (Sousa+ 2010; Tsantaki+ 2013)
 - Atomic & molecular data from VALD but calibrated for the Sun
- Initial conditions
 - T_{eff} : B-V,
 - $\log g$: parallax, T_{eff}
 - v_{mic} : $T_{\text{eff}}, \log g, [\text{Fe}/\text{H}]$ (Tsantaki+ 2013, Mortier+ 2013)
 - v_{mac} : T_{eff} (Valenti+ 2005)
 - $[\text{Fe}/\text{H}], v \sin i$ set to solar values
- free parameters $\rightarrow T_{\text{eff}}, \log g, [\text{Fe}/\text{H}], v \sin i$
fixed parameters $\rightarrow v_{\text{mic}}, v_{\text{mac}}$

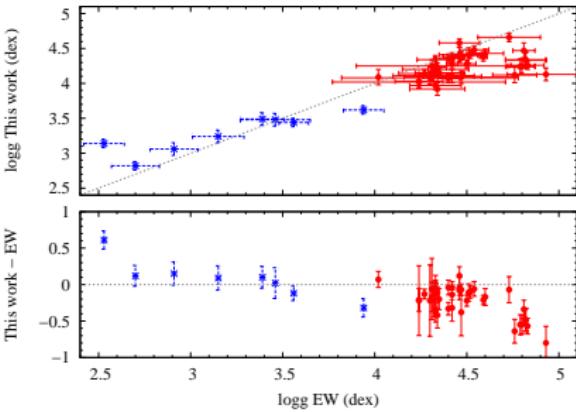

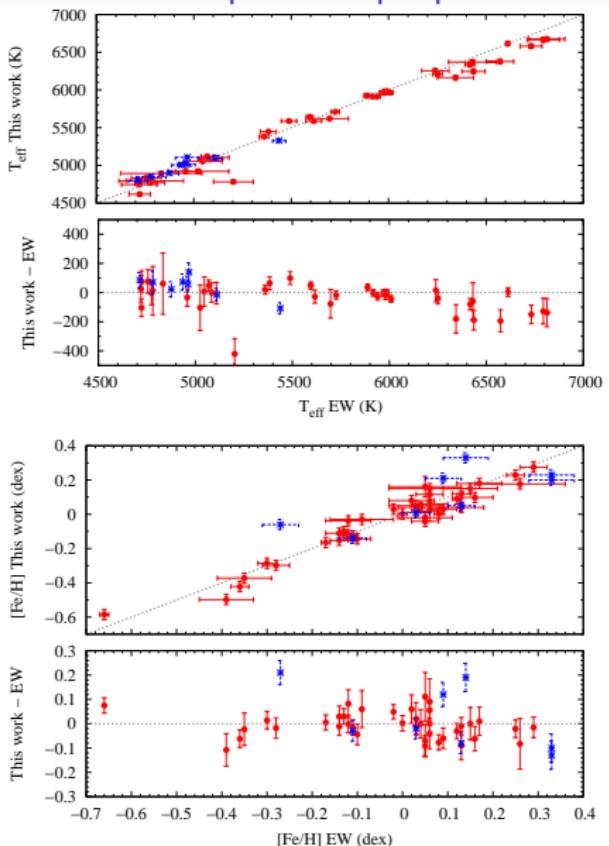

Methodology

- Line list and wavelength intervals
 - Intervals of 2Å around 51 Fe lines (Sousa+ 2010; Tsantaki+ 2013)
 - Atomic & molecular data from VALD but calibrated for the Sun
- Initial conditions
 - T_{eff} : B-V,
 - $\log g$: parallax, T_{eff}
 - v_{mic} : $T_{eff}, \log g, [Fe/H]$ (Tsantaki+ 2013, Mortier+ 2013)
 - v_{mac} : T_{eff} (Valenti+ 2005)
 - $[Fe/H]$, $v \sin i$ set to solar values
- free parameters $\rightarrow T_{eff}, \log g, [Fe/H], v \sin i$
fixed parameters $\rightarrow v_{mic}, v_{mac}$
- Spectral synthesis code: Spectroscopy Made Easy (Valenti & Piskunov 1996)

Methodology

- Line list and wavelength intervals
 - Intervals of 2Å around 51 Fe lines (Sousa+ 2010; Tsantaki+ 2013)
 - Atomic & molecular data from VALD but calibrated for the Sun
- Initial conditions
 - T_{eff} : B-V,
 - $\log g$: parallax, T_{eff}
 - v_{mic} : $T_{eff}, \log g, [Fe/H]$ (Tsantaki+ 2013, Mortier+ 2013)
 - v_{mac} : T_{eff} (Valenti+ 2005)
 - $[Fe/H], v \sin i$ set to solar values
- free parameters → $T_{eff}, \log g, [Fe/H], v \sin i$
fixed parameters → v_{mic}, v_{mac}
- Spectral synthesis code: Spectroscopy Made Easy (Valenti & Piskunov 1996)
- errors
 - number of intervals
 - initial values

Spectroscopic parameters for slowly rotating FGK stars

48 stars

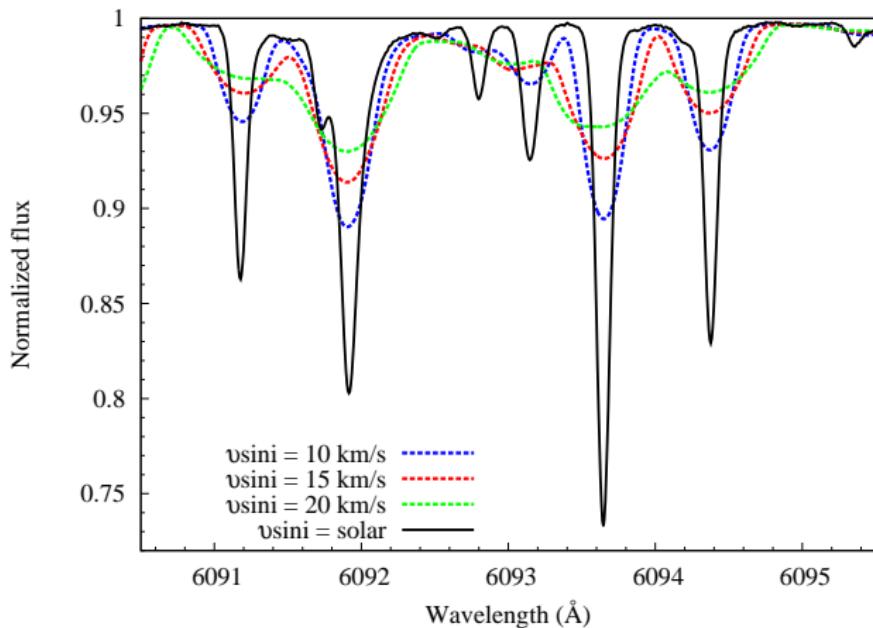

$$\Delta T_{\text{eff}} = -26 \pm 55 \text{ K}$$

$$\Delta \log g = -0.19 \pm 0.14 \text{ dex}$$

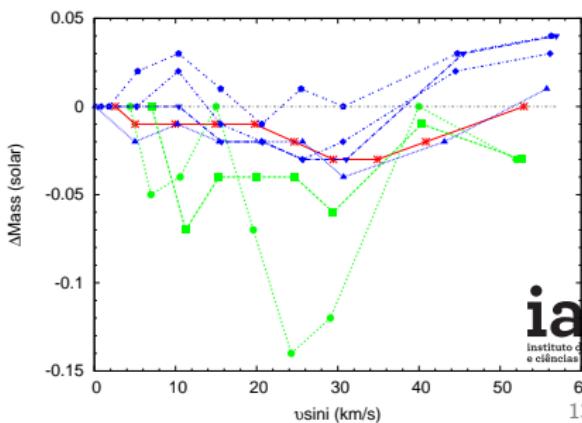

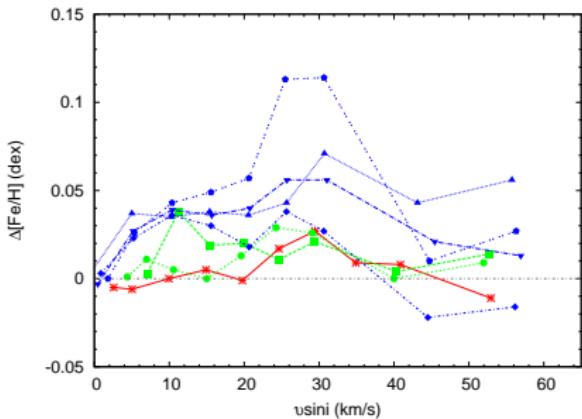

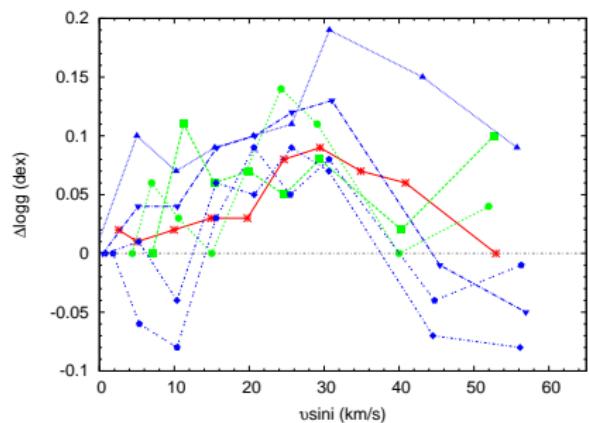

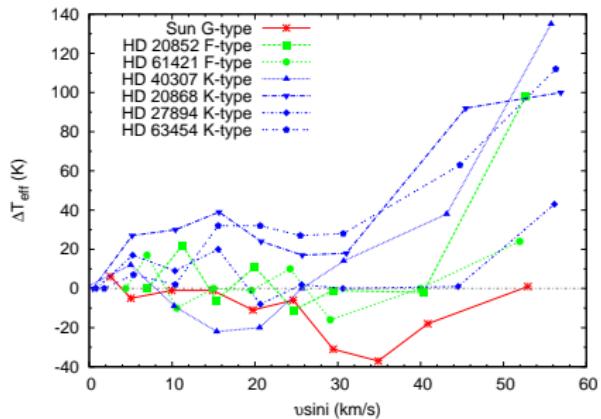

$$\Delta [\text{Fe}/\text{H}] = 0.00 \pm 0.04 \text{ dex}$$

Rotation

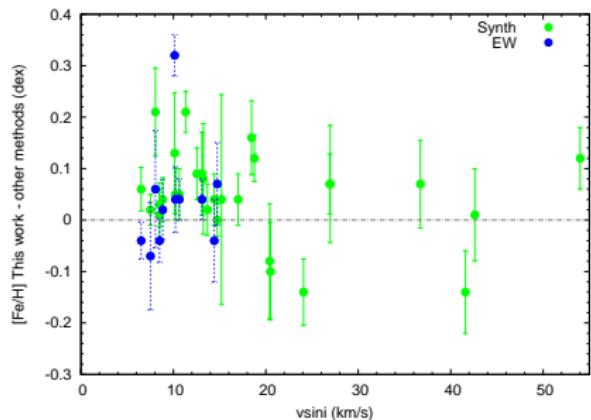

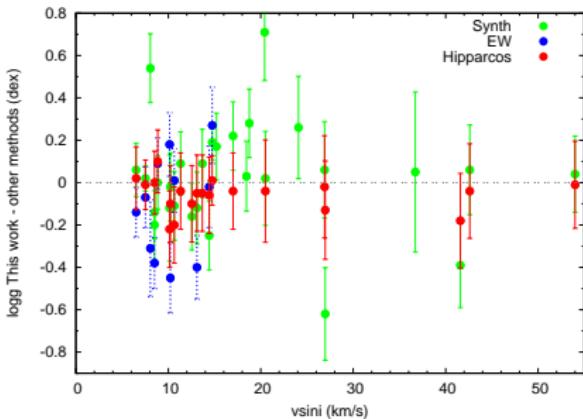

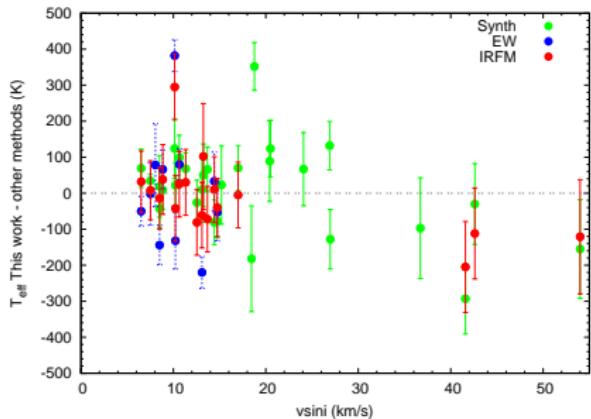

Blending, no proper continuum estimation

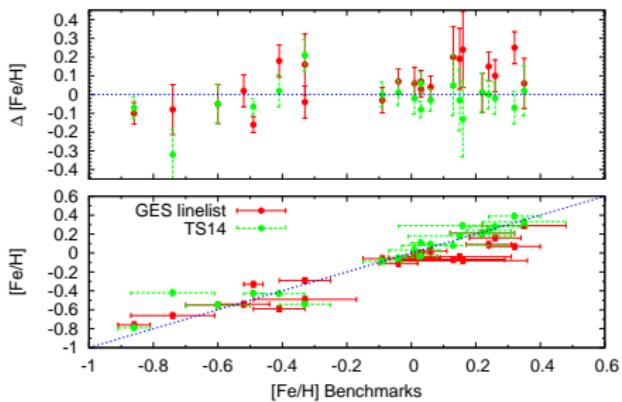

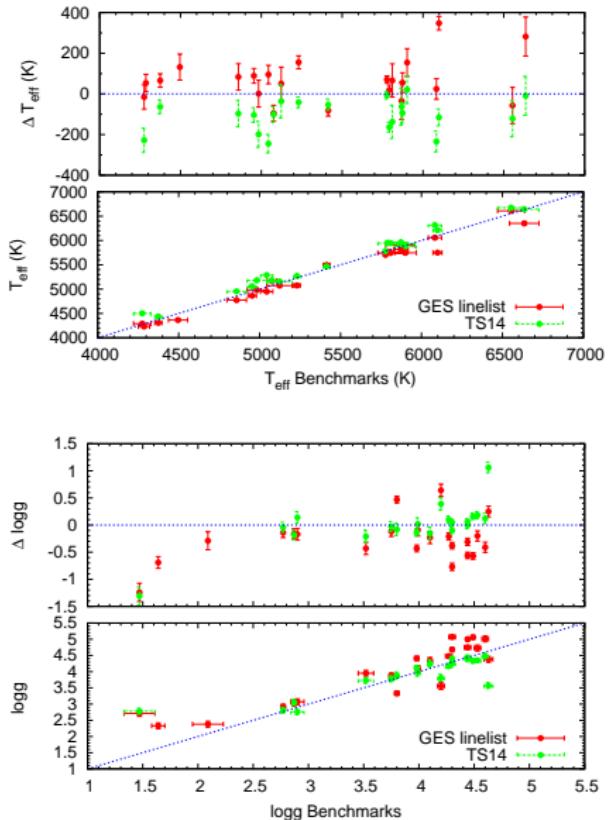

Calculating the limits of rotation

Results for moderate/high rotating FGK stars

The GAIA-ESO linelist v4

Marcs models, same intervals but
different lines
34 Benchmark stars (Jofré+ 2014)

Obrigada!
